S/N	Description of the Issue	Status
1	PDF upload preview and thumbnail has not been fixed yet 	Not Fixed
2	Uploaded pdf documents thumbnail not showing properly 	Not Fixed
3	Default documents in files view should be list not grid 	Not Fixed
4	Uploaded documents interface should carry Basic metadata information as table heading E.g. Document Name, Description, Document Type, Number, and Amount. You can add Date uploaded, Uploaded By and actions. REDUCE FONT SIZE TO ACCOMMODATE ALL THESE INFORMATION THAT WILL BE DISPLAYED. For the Description column, make the default view to capture not more than 30 words with a Read More link that when clicked, it expands the row to view the entire description.	

		
5	I don't understand the use of this button. Kindly make me understand its use pls 	
6	Document preview not functional yet 	
7	File Type not Displaying yet and the branch naming, there is an addition of Unit, Division and Department. Check these words appear twice on the unit interface, division interface and department interface also on the branches in the side meu	

		
8	Search result not clickable to redirect to location of actual document. Should be clickable and upon clicking, takes you to the location of the document 	

9	The Default metadata will not be marked by default except you first select it when configuring for document type and after which you go back to metadata, select the one you want to make default and edit it. This is the pattern I used to get the default metadata activated. I feel that upon setting up the metadata structure, once you activate metadata for default, it should automatically be selected. 	
10	On the upload interface, the Document details section is not properly arranged. The title should come first, followed by description, document number (mandate or AIE or any type of document number), Amount, Date on the document. 	

You can update this document as these issues are looked into and resolved. I will also continue to update the document upon discovery of more fixes.
