MAINCOR
BUSINESS SERVICES LTD.

16 September 2026

The Managing Director/Chief Executive
Nigeria Deposit Insurance Corporation
Plot 447/448 Constitution Avenue
Central Business District
Abuja, Federal Capital Territory

Dear Sir,

Expression of Intent to Provide Human Capacity Development in Artificial Intelligence for Staff of the Nigeria Deposit Insurance Corporation

Maincor Business Services Limited is a Nigerian capacity-development and technical assistance firm, registered in 2011 and headquartered in Gwarinpa, Abuja. We write to formally express our interest in supporting the Corporation with a structured programme of human capacity development in artificial intelligence for its staff, and to request an opportunity to present our approach to your management.

Artificial intelligence has already entered most Nigerian institutions, and it has usually entered informally — through individual officers using publicly available tools on institutional work, often without policy, training, supervision or record. The question before management is therefore not whether these systems will be used, but whether their use will be capable and governed. A properly designed programme does not introduce a new risk to an institution; it replaces an unmanaged one with a supervised capability.

The requirement is particularly consequential for the Corporation. The NDIC carries a deposit protection, bank supervision and failure resolution mandate in a financial system where supervised institutions are themselves deploying artificial intelligence at speed in credit decisioning, fraud detection, onboarding and collections. That creates two distinct needs: the operational need to equip officers across examination, claims and resolution, risk analytics, research, legal and corporate services to use these tools competently and safely in their own work; and the supervisory need to equip officers to examine, interrogate and form defensible judgements about artificial intelligence systems deployed by the institutions the Corporation insures and supervises. A general awareness course addresses neither.

What We Are Proposing

A role-differentiated programme built on a four-level competency framework adapted to the Corporation's own grade and role architecture: AI literacy for all staff, applied practitioner capability for professional and operational cadres, technical capability in data science and machine learning for the analytics, research and information technology cadres, and executive and governance capability for the Board, Executive Management and Directors. The engagement would comprise:

Institutional readiness and baseline diagnostic — current capability, policy position, licensed systems and priority use cases, with staff placed on the competency framework so cohorts are composed by demonstrated level rather than grade.

Governance foundation — AI usage policy, governance charter, register of AI systems and alignment with the Nigeria Data Protection Act 2023, adopted before cohort delivery begins.

No. 7, Road 131 Road,

DIRECTORS
Osareme Itamah (Nigerian) 0806 979 4190 | Munirah Elabor (Nigerian) 0705 267 8187

Phased cohort delivery — role-specific training across Head Office and zonal offices, using the Corporation's own document types and scheduled so no operating unit loses coverage.

Supervisory capability modules — examining AI systems in supervised institutions: documentation to demand, validation reports, and fairness and consumer protection implications.

Practical assessment and certification — certification issued on demonstrated performance, not on attendance.

Training of internal trainers — a certified cadre of NDIC facilitators able to run subsequent cohorts and induct new staff unaided.

Evaluation — application tracking at three and six months against agreed operational indicators, reported honestly including where targets are not met.

Why Maincor

Capacity development is our core business rather than an adjunct to a product. We have designed and delivered competency-based training to Nigerian federal institutions since 2011, including the National Board for Technical Education, the Federal College of Forestry Mechanization Afaka, the Federal College of Forest Resources Management Ishiagu and the Federal Polytechnic Daura, and we have served international humanitarian and development organisations operating in Nigeria — among them the Norwegian Refugee Council, Oxfam, Christian Aid, Malaria Consortium, Management Sciences for Health Nigeria and ICAP — working routinely to their reporting, safeguarding and procurement standards. Institutions supported through our engagements have received grants exceeding USD 1,500,000; those grants went to the supported institutions, and our role was that of technical and training service provider.

Four commitments would shape how we work with the Corporation:

- **Vendor neutrality.** We are not a software reseller and take no commission or margin from any artificial intelligence platform. Where a tool is unsuitable for the Corporation's security, data-residency or regulatory position, we would say so in writing.
- **Governance before capability.** The Corporation's rules on permitted systems and permitted data should be in force and communicated before the first cohort sits down.
- **Assessment on performance.** We would rather certify fewer officers and have the certificate mean something to a supervisor.
- **Capability that stays.** At closure the Corporation would hold the competency framework, curricula, materials, assessment instruments, governance documents and a certified internal facilitator cadre.

We note that the Corporation already operates the NDIC Academy as its institutional learning platform, and our preference would be to establish an artificial intelligence curriculum stream within it rather than deliver a detached series of workshops — placing the capability inside the Corporation's own training architecture, where it can be sustained and extended on the Corporation's terms.

Request

We respectfully request a meeting with your office, or with the directorate you may wish to designate, to present our approach and discuss the Corporation's priorities. We would be pleased, at no cost and at the

Corporation's convenience, to deliver a short executive briefing for Management and to prepare a preliminary institutional readiness assessment as the basis for a properly scoped programme and a costed proposal. We are equally prepared to respond formally to any Terms of Reference the Corporation may issue through its normal procurement process.

Our Corporate Capability Profile on Human Capacity Development in Artificial Intelligence accompanies this letter and sets out our competency framework, programme catalogue, delivery methodology, assessment standards, governance deliverables and corporate particulars in full. Registration documents, assignment documentation, client references and curricula vitae of proposed specialists are available on request.

We thank you for your consideration and look forward to your response.

Yours faithfully,
For: Maincor Business Services Limited
